## Reasons to choose a Portable Davit Base

Part Number:  
PDB200

*Davit arm shown above sold separately.*

## About portable davit bases

Our portable davit base is an ideal solution for fall protection applications where cost, lack of available overhead structure space, or infrequent maintenance schedules, rule out the use of a permanently installed fall protection system.

Diversified Fall Protection's Portable Davit Base combines portability with a safe and secure connection, keeping employees safe.

### Easy to maneuver

Combines the secure connection of a fixed system with the portability of a temporary unit. Wheels allow for easy movability through most any work area by a single person.

### Quick and simple install

Includes everything needed to install quickly - concrete inserts, bolts, and protective cap screws.

### Safe, secure connection

The perfect alternative to large systems that take up too much space, or permanently installed davits that can jam up your workspace.
