Stay OSHA Compliant with Diversified Fall Protection

Load testing is the only way to document OSHA compliance and verify anchor safety

OSHA 1910.27(b)(1)

Requires building owners to ensure each window washing anchor is capable of supporting a 5,000-pound load, in any direction, for each employee attached. OSHA also requires an annual inspection by a qualified person and a certification of each anchorage at least every ten years.

OSHA 1910.27(b)(1)(ii)

Requires window washing contractors to obtain written proof from the building owner that each anchor has been inspected and certified to support a 5,000-pound load per employee attached.

Certified testing directed by qualified Fall Protection Engineers

- Each anchor certification is directed by a qualified engineer and performed by our in-house inspection team to ensure OSHA compliance and fall assurance.
- Our automated annual inspection program guarantees timely execution and documentation to streamline your operations and ensure continued compliance.
- Each certification is backed by our industry-specific liability insurance for 10M. A certification from Diversified Fall Protection offers both OSHA compliance and liability protection.
